

MAKE YOUR OWN FLUBBER!

1. Pour the glue into the container. Fill the empty glue container with warm water, close it and shake. Add the water to the glue, along with a bit of food coloring, and use one of the sticks to stir. Add more food coloring if needed.
2. Pour the packet of Borax (1 ½ teaspoons) into 3 ounces of hot water and use the other stick to stir until it's dissolved. Slowly pour it into the glue mixture while stirring. Keep stirring and in a bit the mixture will turn into flubber! If there's any excess water, drain it out.
3. Keep your flubber in the sealed container when not using, to keep it from drying out.
